Lat. *plágēarius* (*plágium*, kidnapping; Gk. *plágios*, treacherous).

This is not a French but a Frenchified word.

Lat. *plaga*, a blow or stroke [inflicted by God]; Welsh *pla*; Germ. *plag*.

It is a great pity that the termination -ue after g and q is not abolished. It never aids the pronunciation, but misleads and in most cases renders the word ridiculous: thus *plagu-ing, intrigu-ing, harangu-ing, piqu-ing*, &c., are simply abominations.

-ite denotes a salt formed by an acid ending in -ous (with a base): as bi-sulphite of lime [two equivalents of sulphurous acid to one of lime]. (-ous denotes an acid with a minimum of oxygen.)

If the acid of a salt is in excess of the base, the excess is notified by the Lat. prefixes bi- or bin- (two), ter- (three), quadri- (four), quin- (five).
If the base is in excess of the acid, the excess is notified by the Greek prefixes prot- or proto- (one), di- or din- (two), tri- or tris- (three), tetra- (four), penta- (five). Thus, din-iodide of copper means a compound containing two atoms of copper to one of iodine; but bin-iodide of mercury means two atoms of iodine to every atom of mercury. So tris-acetate of lead means three atoms of the oxide of lead to every atom of acetic acid; but ter-acetate of lead means three atoms of acetic acid to every atom of lead.

Sub indicates simply that the base named is inferior in quantity to the acid, without denoting the proportion. Per indicates simply that it is superior in quantity, without denoting the proportion.

Sesqui- means one-and-a-half: thus sesqui-chloride of iron means there are three atoms of chlorine to every two of iron (that is, in the proportion of $\frac{3}{2}$, for an atom being indivisible cannot be halved).

Sempster, fem. sempstress, sēmp'stér, sēmp'stre.ss, one who works with a needle; sempstressy, sēmp'stre.ssy, the vocation of a sempstress.

It is a great error to suppose that -ster is a female suffix, indicating the vocation of a woman, and hence the following remark of Dr. E. Adams is quite erroneous: "In early times brewing, baking, weaving, spinning, fulling, &c., were carried on exclusively by women. Hence such names [words] as maltster, brewster, baxster, spinner, kempster, whitster, &c. The truth is that -ster is added to nouns quite irrespective of gender, some of the nouns with this suffix being masculine, some neuter, and some others feminine. Its force is to denote "skill obtained by practice," "a vocation." So that "maltster" does not mean a female malt[ing] person, but one whose vocation is to malt, one skilled in malting. Even spinster refers to young women only accidentally, because spinning was at one time their chief vocation. "Sempster," "sempstress," should be seamster, seamstress.

"Sergeant," Old Eng. sergeaunt (Lye, Dict. Sax.); Fr. sergent, -major. "Sergeants" (at law), Fr. frères serjens, a corruption of [Lat.] fratres servientes [of the Templars]. The "colt" is a relic of the "lunar colt" of the old "frères serjens." (See Serjeant.)

Led by the French sergens, used for both sergeant and serjeant, we find these words, out of the two professions, very unsettled:

In military despatches, gazettes, and army lists, serjeant is the spelling almost uniformly adopted.

In Wharton's Law Dictionary, which may be assumed as authority in the legal profession, we find serjeant is invariably employed. (The more correct spelling, no doubt.)

Old Eng. v. serian, past serede, p.p. sered, to make a series, to array.
Serio·comic, see'.rī.o-kōmˈık, a combination of the serious and comic; serio·comical, see'.rī.o-kōmˈık.ˈhəl.

When an adjective is agglutinated with a hyphen to another word we almost invariably terminate the word prefixed with the vowel -o-. The Greeks and Latins did this to some extent, regardless of the orthography of the word prefixed, but far more generally they preserved the radical vowel unchanged: Thus we say the Franco·Prussian (war), the Anglo·Saxon (language), politico-religious, serio·comic. Our language not being inflectional, like the Latin and Greek, we are free to use any vowel we like.

Serious, see'.rē.ˈūs, grave, solemn, important; seˈriəs·ness, seˈriəs·ly. (Lat. sērius, “a serendo, asserendo,” Perottus.)

Colour-sergeant, a non-commissioned officer whose duty it is to assist the officer who has charge of the colours of a regiment.

These two words ought to be kept distinct: (1) Because all our military terms are French, like colonel, major, lieutenant, &c., and sergeant is French; but all our law-terms are Latin or Franco-Latin, and servientes gen. servientes [serˈjent] is Latin; (2) Because the army, the gazettes, and the military dispatches, &c., adopt the Fr. sergeant; but lawyers and law dictionaries the Lat. serjeant.

"Serjeants," French frères serjens; (Latin) frātres servientes [of the Templar Knights]. The coif is a relict of the “lunar coif” (or halo) of the old frères serjens.

Servus servorum, the style adopted by a pope.

Time-server, a trimmer. Service tree, for sorbus tree.

The style of concluding a letter when an inferior writes to a superior, or a superior to an inferior, is very formal and arbitrary: e.g.

To a SOVEREIGN.

Your Majesty's most faithful subject and dutiful servant.

To a PRINCE or PRINCESS, a ROYAL DUKE or DUCHESS.

Your Royal Highness's most dutiful and most obedient servant.

To a DUKE or DUCHESS [not royal].

Your Grace's most devoted and obedient servant.

To a MARQUIS or MARCHIONESS.

Your [Lordship's] most obedient and most humble servant.

To an EARTH or COUNTESS, VISCOUNT or VISCOUNTESS.

Your [Lordship's] most obedient and very humble servant.

To a BARON or BARONESS.

[Sir] Your most obedient and very humble servant.

To a BARONET, KNIGHT, or the WIFE.

[Sir] Your most humble and obedient servant.

To one of the PRIVY COUNCIL or an ESQUIRE.

[Sir] Your most obedient and very humble servant.

To an ARCHBISHOP.

Your Grace's most devoted obedient servant.

To a BISHOP.

Your Lordship's most obedient humble servant.

To a LORD MAYOR or LADY MAYORESS.

Your [Lordship's] most obedient humble servant.

To an AMBASSADOR.

Your Excellency's most obedient humble servant.

To all other SUPERIORS.

Your humble servant; Your obedient servant; Your humble and obedient servant. (To an equal, Your's truly; Your's faithfully.)

To an INFERIOR.

Your's, &c., Your's obediently, Your humble servant.

Of course all these formalities are abandoned by ladies and gentlemen who claim any degree of social intimacy with the person addressed. An equal writing to an equal whom he wishes to "snub" uses the style of a superior "to an inferior," the most offensive being Your's, &c., the Pharisaic style of "stand back, &c."

Shall. Will. These words are both independent verbs and also auxiliaries, but in both cases they stand in regimen with other verbs without the intervention of to.

In the sense of simple futurity (or as a sign of the future tense) shall is used only in the first person (sing. or plu.), and will in the other two persons.

In the first person will denotes intention or expresses a promise, and in the other two persons shall (secal-, to compel) denotes compulsion (moral, legal, or physical).

I shall [come to-morrow]. We shall [come to-morrow].

[He or she] will [come to-morrow]. They will [come to—...]

Will stands for an auxiliary and two active verbs (to intend, and to bequeath). As an auxiliary it is employed only in the second and third persons. As an active verb it is employed in all persons. Omitting the verb "Will" (to bequeath), the idea of "Will in the Future is this:

I will [come to-morrow], I intend to come, I promise to come.
You will [hear from me to-morrow] {simple futurity.}

The sun will [rise at six to-morrow] {simple futurity.}
The horses will [start in an hour] {simple futurity.}

SHALL, as a simple sign of the future tense, is used only in the first person (sing. or plu.); in all other persons it denotes compulsion (moral, legal, or physical).

(It cannot mean compulsion in the first persons, because I cannot compel myself to do anything against my will. I may force my will, but the will must be on the side of the act.)

1. I shall [write to-morrow]. We shall [all die], future.

2. Thou shalt [love thy neighbour as thyself], command.

3. [I say] he shall [do it], compulsion.

4. You shall [have a cheque to-morrow], promise.

Exam.: (2.) implies legal compulsion, (3.) physical compulsion, (4.) moral compulsion or obligation.

N.B.—The sum of any two opposite pages of a fold is always equal: Thus, in a newspaper the two opposite pages are respectively 1+8=9; 2+7=9; 3+6=9; 4+5=9; therefore a person who has the outer half-sheet of a newspaper has pp. 1, 8; 2, 7. A person who has the inner half-sheet of a newspaper has pp. 4, 5; 3, 6. "Leaders" are printed on the fourth and fifth pages that the reader may hold the whole in hand when the paper is cut.

Shelv'-y, full of dangerous shoals or shelves; shelv'-ness (R. x). Of the sixty nouns ending in -f, twelve form the plural by changing "f" into -ves, and all but two of these twelve words end in -of or -lf. The two exceptions are "thief," plu. thieves; "beef," plu. beves. Only one word ending in -lf ("gulf," gulfs) deviates from the rule. The other ten are "leaf," leaves; "sheaf," sheaves; "loaf," loaves; "staff" (a stick), staves. "Calf," calves; "half," halves; "elf," elves; "self," selves; "shelf," shelves; "wolf," wolves. Shilling, a silver coin equal to twelve pence. Its half is a silver sixpence, its third a silver four-pence, its fourth a silver three-pence, its twelfth a copper penny, its twenty-fourth a copper half-penny, its forty-eighth a copper farthing. The advantage of our money system is its divisibility: A shilling can be divided into five parts (2, 3, 4, 5, 6), but a "frame" into three only (2, 4, 5); hence if articles are 8, 6, 7, or 8 for a franc, one of them cannot be bought without loss; but with our money system none at 5 or 7 a shilling would involve a loss.

This verb shews the utter worthlessness of the c final as a guide. In
"shine" it lengthens the preceding vowel, but not in "shone." It is quite as often wholly effete as not: thus in the 445 words ending in -ive it lengthens 8 monosyllables, omitting give and live. With the latter it shilly-shally, the i in "live" being short, but long in alive; short in live-long, but long in live-ly; short in out-lived, but long in long-lived, &c. In above 430 of the words the -ive is short: as in active, fugitive, &c.

Should, Would, past tense of shall, will.

Both these words are signs of tenses, and also 
independent verbs, which stand in regimen with other 
verbs without the intervention of to.

§ As a simple sign shall and should are employed only 
in the first person (sing. and plu.); in the other persons 
they imply constraint (moral, legal, or physical).

Shall is used (in the first person) as the auxiliary of 
the future tenses. Should (or should with auxiliaries) 
in every tense of the conditional or subjunctive mood.

§ As a simple sign will and would are employed only in 
the second and third person (sing. and plu.); in the first 
person they imply intention or inclination.
AND OF SPELLING.

Will is used (in the second and third person) as the auxiliary of the future tenses. Would (or would with auxiliaries) in every tense of the condit. or subj. mood.

The great difficulty of these words consists in this: as independent verbs they are used in every person: thus

I shall be glad to see you - - - - signs of the future
He (or they) will be glad to see you - - tense.
I should be glad to see you, if... - - signs of the present
He (or they) would be glad to see you, if... condition.
I will do it. We will come to-morrow - (promise).
He shall do it. They shall come to-morrow (promise).
I would if I could. We would come if... (willingness).
He should do it. They should come if... (duty, promise).

Used as independent verbs:
§ I will that thou give me John Baptist's head in a charger (I desire or wish) (Mark vi. 25).
Jesus said: Will thou be made whole? [Is it your desire] (Jn. v. 6).
Let her go whither she will (wishes) (Deut. xx1. 14).
Whoever will, let him take of the water of life freely (Rev. xxii. 17).
Ye will not come unto me that ye may have life (you are not willing, not desirous) (John v. 40).
§ What I would I do not, but what I hate that I do (Rom. vi. 15).
Sacrifice and offering wouldst not [dost not desire] (Heb. x. 5).
They would none of my counsel [they desired] (Prov. i. 30).
Whom he would he slew, and whom he would he kept alive, and whom he would he set up, &c. (Dan. v. 19).

Shall, Should, independent verb.
I shall come to-morrow (promise, moral compulsion).
You shall come to-morrow (promise).
He that believeth shall be saved (promise).

In questions, "shall" in the first person denotes doubt. In the second person demands the intention of the person addressed.
In the third person asks permission.
Shall I write to him [or shall I not]? (doubt).
Shall you write an answer? (is it your intention).

Socinians assert that Christ had no existence till his human birth, when he received a double nature, divine on the father's side and human on the mother's. Humanitarians go one step further, and maintain that he had only a human nature like any other man. Arians are so called from Arius, of Alexandria (died 336). Ut queant laxis
Re-somare fibris
Mi-ra gestorum
Fa-muli tuorum
Sol-ve pollutis
La-bis reatum
Sancte Joannis.

Ut-ter outcast the I he,

Me permit thy praise to sing,

La-boured tho’ the verse and lowly
St-lent never my string.

Barbarism, a word which does not conform to the usual laws of a language or rules of derivation.

A solecism may become an established mode of speech, but a barbarism can never be otherwise than a barbarism. Such phrases as "I shall not go while [until] twelve," "He went to sleep like, as you did," are solecisms. But such words as espray, manacles, raillery, sempstress, sociology, seignior, &c. are barbarisms. They are radically wrong, and no custom will make them right.

Greek so·loikismos, so·loikos (Sōloikoi, the Athenian colonists of Soli, in Cilicia, who greatly corrupted the Greek language. Only male birds sing, and no song-bird exceeds a blackbird in size, unless indeed the crowing of a cock is called singing. The song of very few birds is capable of imitation on any musical instrument because the pitch is so high and the intervals so minute. The cuckoo sings with an ordinary interval. The nightingale has sixteen different methods of beginning and closing its refrains, the intermediate notes being arranged in endless variety, and sometimes sustained for twenty minutes. The sky-lark comes next in variety of note, execution, and in the length of time which it sustains its song. No other bird (except some canaries) can execute more than four or five-changes or sustain its song above a few seconds without pausing.

Song-less. For an old song, for a very small outlay.

Songster, fem. songstress, a male and female singer.

(-ster does not denote a female, as most grammars assert. It is added to any gender, and simply denotes that skill which arises from practice. Even spinster is no exception, and is applied to unmarried women only from their skill and practice in spinning.)

These words have quite run from their original meaning. Before the time of Pythagōras (B.C. 580-500) the Greek sages were called sofists (wise men). Pythagoras out of modesty called himself philo-soφer (a wisdom lover). A century later Protagōras, of Alēder, resumed the old title, and a set of quibblers appeared in Athens who professed to answer any question on any subject, and from that moment sofies and all its family of words have been restricted to "wisdom falsely so called."

Great diversity of opinion exists respecting the use of storey applied to a house: is the basement floor the basement storey, or is the first storey the floor above the basement? But if the first storey is the floor above the basement floor, then the majority of English houses (which have but two tiers of windows) are only one storey high, and those houses which have only a basement above ground are not even one storey high.

Our series of words are senseless contractions from the French, but surgeon is itself a French word meaning a "surfer." Even accepting "surgeon" as a vocal representative of chirurgien, "surgery" is very objectionable. Mercer-y is from "mercer," confectioner-y from "confectioner," grocer-y from "grocer," milliner-y from "milliner," ironmonger-y from "ironmonger," &c., so surgeon-y should point to "surge." On the other hand, "mason" makes mason-ry not masonry, "deacon" makes deacon-ry not deacory, "falcon" makes falcon-ry not falconry, "pigeon" makes pigeon-ry not pigeonry, &c. "Surgical" is all very well if we take it independent of "surgeon," but it is not a normal adj. of that word.

Sorites, a syllogism with more than two premisses piled together. (For example see Sorites.)

In a syllogism, the "subject" of the conclusion is the minor term, and the "predicate" is the major term, and these must cross each other—that is, the subject of the major must be the predicate of the minor. The major and minor must never have the same predicate.

(1) (Major) Every plant has a root.
(Minor) The oak is a plant.
(Conclusion) Therefore the oak has a root.

(2) Every plant has a root. (3) Man has two eyes. The oak has a root. Therefore the oak is a plant. Therefore a cow is a man.

(The teasel used by clothiers is called “Fuller’s teasel.” There is a small teasel usually called “Shepherd’s Rod.” The largest teasel awns are called “kings,” the smallest “mannikins,” and the intermediate awns are called “middlings.”)

Te Deum, tē.de’i.əm, a hymn of thanksgiving. (See Tedium.)

In the English Prayer Book it begins with the words We praise thee, O God. The Latin canticle (called the Ambrosian hymn) is generally ascribed to St. Ambrose, but probably it is of a much later date.

The te deum of architecture is a series of carved figures in niches: (1) angels, (2) patriarchs, (3) apostles and evangelists, (4) saints and martyrs, (5) founders. In Salisbury cathedral there is a te deum.

Tedious, tee’di.əs (not tee’di.əs), wearisome, “long winded,” irksome from length or repetition; te’dious-ly, te’dious-ness. Te’dium, wearisomeness. (See Te Deum.)

Latin tēdium; the Latin adjective is tēdilēs not tēdius.

Teetotalism, *te.tō'āl.i zm.* Temperance, *tēn'pē.rance.*

Teetotalism; total abstinence from intoxicating drinks.

Temperance, a moderate use of intoxicating drinks.

Teetotal, *tee.tō'āl,* adj. Teetotall-er, *tee.tō'āl.er.*

Dissyllables accented on the first syllable and ending in *-al* are more irregular than even those ending in *-el.* It should be made a rigid rule that all words ending in *-el* double it when a suffix beginning with a vowel is added, or else that they conform to the general rule (Rule iii.) What can be worse than such spelling as:

Petal, *petalled, petal-inB,* petal-ism~.

"*Teetotal.*" The most probable origin of this word is that Richard Turner (Dicky Turner), addressing a temperance meeting in Sept., 1833, reduplicated the word in order to increase its force. "We want not only total abstinence, but *tee-total.*" The ludicrous but uncompromising word took the meeting by storm.

Teetotum, *tee.tō'ūm,* a spinning toy. (Titter-totter-um.)

"Telamones," Gk. τελάμων gen. τελάμον, a band or strap for supporting anything, from ταλάω, to support (Latin tolerare).

"Atlantes," from Atlas, fabled to bear the world on his back.

"Caryatides." Praxitéles employed figures of Caryan women and Persian men instead of columns, and Vitruvius tells us the reason is because the Carians sided with the Persians in the battle of Thermopylae.

"Perses" (see above). F. W. Fairholt, in his Dict. of Terms in Art, spells the word Perces, but this is evidently an error.

"Gigantes," Gk. gigantes, sons of Ga[earth], whence the name gé-génés.

Tel-erpeton, tēl·er·pē·tōn, a small fossil reptile from certain white sandstones near Elgin [El'gin not El'-djin].

Tele-stich, tēl·ē.stīk, an acrostic in which the name is spelt out by the last letter (not the first) of the respective lines.

Greek tēlōs stichos, the end (of the) lines. (Better Telesstich.)

Suppose the word to be ANNE. If the stanza began with such words as Arise, Now, Nor, Engage, ... it would be an ordinary acrostic; but if the last words of the four lines were such as ... sea, ... nation, ... sun, ... me, it would be a telesstich.

Tell, (past) told, (past part.) told; tell′-ing, to reveal, to narrate, to betray, to explain, to count, to produce an effect:

as It was a telling speech, every word told.

Tell′-er. Tell′-tale, one who officiously blabs of another.

To tell off, to count off. To tell of [not on], to inform about.

(To tell on is vulgar and quite incorrect.)

We say: tell a story or tale, but not tell a speech or lesson; tell the reason, but not tell the arguments; tell the exact number of every article, but not tell an inventory; tell the truth or tell a lie, but not tell a statement; tell something, tell all about it, but not tell a history.

(-ic denotes an acid with a maximum of oxygen, -ous an acid with an inferior proportion of oxygen.)
Tellurate, telluric acid.
Tellurite, tellurous acid.

If selenium makes selenium and tellurium should make tellurium, or vice versa. (ate, a salt from an acid in -ic; -ite, a salt from an acid in -ous.)

Tellurett-ed, tellurite, combined with tellurium.

Great irregularity exists in the spelling of words ending in -et, with the accent on the first syllable. Thus we have carburetted, coronetted, gaited, helmetted, &c. The double t should be abolished.

Temerity, rashness, foolhardiness. (Lat. temeritas.)

Tempest, a complicated storm accompanied with violent wind. We never speak of a snow-tempest (which is one thing), a hail-tempest, a thunder-tempest, &c.

Strictly speaking a storm is simply a disturbance in the equi-
librium of the air, which spreads and behaves according to natural laws. Mr. Redfield says, that "storms whirl in a horizontal circuit round a vertical axis of rotation carried forward by the storm." A storm of wind is quite correct, but a snow-storm, hail-storm, and thunder-storm are not strictly so, as hail, snow, and thunder are only accidents or accompaniments of the storm and not the storm itself.

Tempestuous, tēm'pēs'tū.ūs (not. tempe's'tē.ū.ūs); tempest'uous-ly, tempest'uous-ness. Tempest tossed, tūst.

"Tempest," Latin tempestus, tempestuōsus.

We have very few of these French double plurals: as Knights Templars, Knights Hospitallers, Lords Lieutenants, Lords Marchers. These Gallicisms are as silly as Lords Mayors would be.

"Temple" (of the forehead), Latin tempus or tempōra, tempōralis.

"Tempus" means time as well as the temples, and this part of the head is called the "time-gauge" or "age-tell-tale" because the hair of this part of the head turns white or falls off as age advances, hence cana tempus is about equal to hoary age.

Temporal, tēm'po.rāl, pertaining to the temples of the head (see above); pertaining to time, to this life, to this world, to this body; temporal-ly. Temporality, plu. temporalities, tēm'po.rāl'ī.tiz, or temporals, tēm'po.rālz, secular possessions, clerical revenues (such as lands and tenements) attached to livings or church offices by kings and others wholly irrespective of ecclesiastical rights.

“Term,” French termes; Latin terminus; Greek termai or termoν.

Termagant, ter'ma.gant, a virago; termagancy, bullying.

Out-doing termagant, tearing a passion to tatters.

The author of “Junius” says this was a Saxon idol and means “very mighty” (Tyr magan); but probably it is the Persian ter magian (Majian lord or deity). The early crusaders called all pagans Saracens, and muddled together Majianism and Mahometanism, so that “Termagant” was called the god of the Saracens or the copartner of Mahound. Hence Ariosto makes Ferrau “blaspheme his Mahound and Termagant” (Orlando Furioso, xii. 59).

The change of sex arose from the stage custom of representing Termagant in Eastern robes, like those worn in Europe by women. “Termagant” and “Herod” being the models of wickedness were represented in old plays as settling everything (like Punch) by club law, and ranting in the true “tyrant’s vein.”

(The only exceptions are *thummim* (Heb.), *thump* a corruption of "dump," *thaler*, and words beginning with *thuri-, which are directly from the Latin and indirectly from the Greek *θυνιος*.)

-th (final) converts adjectives to abstract nouns of a positive character (*-ness* is used for abstract nouns of a negative character), as "broad," breadth; "dead," dead[th]; "deep," depth; "five," fifth; "fore," forth; "high," height[th]; "long," length; "six," sixth; "strong," strength; "ten," tenth; "true," truth; "warm," warmth; "wide," width. We have not a single example of an abstract noun of a negative character so formed. This will be seen by trying the negatives of the above as "narrow," narrow-ness (not narrowth); "shallow," shallow-ness (not shallowth); "short," short-ness (not shorthand); "weak," weak-ness: "cold," cold-ness; and so with the rest.

DOES THAN EVER GOVERN THE OBJECTIVE CASE? Certainly not. But this answer in no wise meets the question whether the phrase: than me, than him, than whom, &c., are absolutely incorrect.

We can say in French il est plus riche que moi, or il est plus riche que je ne suis, and may we not use the Gallicism He is richer than me, instead of the more normal construction He is richer than I?

The pronouns moi, tui, &c., are called in French disjunctive personal pronouns, and after these pronouns are employed when the verb is suppressed. The real question is, therefore, whether than ever governs the objective case, but whether we may use the pronouns him, her, whom, &c., as indeclinable disjunctive pronouns after the French fashion?

The answer must be obtained from the usages of standard writers, and there cannot be a doubt that numerous examples may be found to justify these Gallicisms. Take the following:

"He was a poet sublimer than me" (Prior).
"You are a much greater loser than me" (Swift).
"She suffers hourly more than me" (Swift).
"No mightier than thyself or me" (Shakespeare).
"A stone is heavy and [the] sand weighty, but a fool's wrath is heavier than them both" (Prov. xxvii. 3).
"The old martial stock than whom better men never did... draw sword" (Scott, Nigel xxvii.)
"Than whom a fiend more fell nowhere is found" (Thomson).
"Bélial came last, than whom a spirit more lewd
Fall not from heaven" (Milton).
"Which, when Belzebub perceived, than whom (Satan except) none higher sat..." (Milton).

These examples might easily be multiplied; still it must be confessed that the preponderance of examples is on the other side. Thus we have the following:

"There is none greater in the house than I" (Gen. xxxix. 9).
"Only in the throne will I be greater than thou" (Gen. xii. 40).
"His younger brother shall be greater than he" (Gen. xviii. 10).
"The people is greater and taller than we" (Deut. i. 28).
"The fourth shall be far richer than they all" (Deut. xi. 2).

The answer seems to be this: the more normal method is the ordinary pronouns in the nom. case, but the Gallicisms may be justified by many right reverend examples.

The reply is (1) It is sanctioned by very general use; (2) "Thanks be to God" occurs four times in the Bible; (3) It is terse and expressive, "Thanks" is not I thank you, but thanks be to you, and the contracted form thanks is justified by several like expressions: as Good-day [be to you], Welcome [be to you], Hail [health be to you], and so on. "Thanks" (plural) occurs 55 times in Shakespeare.

The plural thieves ought to be abolished for two reasons: (1) because it is wrong, as may be seen above, and (2) because it is the only word (except "beef," beeves) which violates this general rule:
"the only words ending in -s which form the plural by changing it into -ss are those which end in -ur or -ar" (Rule xxxviii.)
Thus we have "belief," beliefs; "brief," briefs; "chief," chiefs;
"clef," clefs; "fiel," fields; "grief," griefs; "handkerchief,"
handkerchiefs; "misbelief," misbeliefs; "mischief," mischiefs;
"relief," reliefs.

Theine, thē′.in (not tē′.in), a bitter principle found in tea.
Caffeine, kā′.fi.in, the same principle found in coffee.
"Theine," from thea, the tea-plant; Chinese tcha or tha.
"Caffeine," from the Turkish cahveh; Arabic cahuah or cahoeh.

Their, thare, belonging to them. There, thare, in that place.
Their is used adjectively, as their house, their own farms.
Theirs is used as an indeclinable pronoun in any case: as
1. Our farm is the largest, but theirs is the best (nom. to the verb is).
2. The man who prunes my trees prunes theirs also (obj. after prunes).
3. Twist our best actions and the worst of theirs (governed by of).
4. Between my garden and theirs is a high wall (possessive case).
   To say that these sentences are elliptical and that theirs="of them" is to beg the question, and cannot be applied to No. 3 without a double "of."

Their (for his or her). Is it correct to to say "Neither John nor his sister knew their lesson"? or must we say "Neither John nor his sister knew his or her lesson"?
"Neither" sometimes unites in a negative predicative, and in that case may be followed by a verb or pronoun plural. In the example given above, the meaning is John and his sister were both unprepared with their (respective) lessons.
"Neither you nor I are in fault" (M'Culloch). That is, "You and I too are without fault."
"Neither physic nor law are practically known from books" (Fielding). That is, "Physic and law are not to be learnt practically from books."

5 Are the following correct or incorrect according to this law?
1. "A lampoon or a satire do not carry in them robbery or murder" (Addison, Spectator).
2. "Thebes' body is as good as Ajax' When neither are alive" (Cymb, iv. 2).
4. "Either my brother or his son is king. And neither of them thirst for Edmund's blood" (Marlow).
5. "Neither be nor Broadhem smoke (Piccadilly, p. 31).
6. "Nor wood, nor tree, nor bush are there" (Scott, Water-loo).
7. "Hæc si neque ego neque tu fecimus" (Terence, Andria).
   "There" (in that place), Old English ther, thar, or ther, adv.

Theist, thē′.ist. Deist, de′.ist. Atheist, a′.the.ist.

Theist, one who believes that there is a God who superintends and governs all creation, but does not believe in the doctrine of a trinity or in revelation.
Deist, one who believes that there is a God who created all things, but does not believe in his superintendence and government. He thinks that the creator implanted in all things certain immutable laws, called the laws of nature, which act per se, as a watch acts without the interference of its maker. Like the theist he rejects revelation and the doctrine of a trinity.
Atheist, one who disbelieves even the existence of a God. He thinks that the elements of material things are eternal, and that creation is the result of the natural laws of matter. (Not of blind chance.)

Theism, the·i·zmm. Deism, de·i·zmm. Atheism, a·the·i·zmm. Theistic, the·i·st·ik. Deistic, de·i·st·ik. A-theis'tic.

Theistical, the·i·st·i·kāl. Deistical. Atheis'tical.

Them, obj. case of they (plu. of he, she, it); themselves (2 syl.); them in propre persona. (No such word as theirselves.)

We say my-self, thy-self, your-self, her-self, our-selves, &c, but not his-self, its-self, and their-selves, the self of me, of thee, of you, of her, of us, but not of him, of it, of them. Probably the dative (not the objective) case was the original form: as "me-self" (corrupted into my-self), "the-self" (corrupted into thy-self); "her-self, him-self" plth. (Them-selves (all datives). The gen. cases would be min-self, thyn-self, her-self, his-self, hir-self.

Greek theodómas héodos útos, I view or survey a smooth road. The usual etymology is theodómas dolichós, I view a long way; or theodómas dolos, I view [by art] stratagem. If the new suggestion is correct the word should be (according to our usual method of spelling such compounds) theodolite; if either of the other two suggestions is correct, the word is hopelessly ill-formed.

This kind or sort. These kind or sort. That kind or sort.

Those kind or sort. The question is this: When a plurality of things is referred to, should this and that (followed by sort or kind) be sing. or plu.? Should we say this sort of things or these sort of things; that kind of flowers or these kind of flowers? The reply is this: Our best writers and speakers use these and those, making sort-of-things, kind-of-things, &c., a compound-word or sentence-noun. Examples:

"These kind-of-knaves I know" (Lear ii. 2).
"That crow so at these kind-of-fools" (Twelfth Night i. 5).
"These sort-of-authors are poor" (Pope).

Similarly we say: "All kind-of-fruits" (Lear ii. 5).
"All kind-of-deeds" (Ezek. xxvii. 12).

Thew, plu. thesees, sinew, muscle. Thew, physical strength.

Old English *thēw* or *theaw*.

They, plu. of he, she, it; objective them.

Their is used adjectively. Theirs is used as an indeclinable pronoun of any case. (See p. 1311, Their.)
Thick, (comp.) thick’er, (super.) thick’-est, not thin, dense, 
close, muddy, not clear, deep (as five inches thick), crowded 
together, stupid, intimate and attached to each other.
Thick’-ly, thick’-ness, thick’-ish (-ish added to adj. is dim. 
added to nouns it means “like”). Thick’-headed, -hèd’-ed.
Thick’-set. Through thick and thin, through 
whatever may befal whether good or evil.
Thick-en, thick’n, to make thick (-en converts adj. to verbs); 
thickened, thick’-en’d; thicken-ing, thick’-ing.
Thick’et, a copse with thick underwood.
Old Eng. thic or thicc, thicce thickly; thiccek, v. thiccolan.
Thief, plu. thieves, theef, plu. theevz, a robber, one who steals.
Thieve, theev, to rob; thieved, theev’d; thiev’ing, theev’ing 
(R. xix.); thiev’ish, theev’ish.
Theft, plu. thefts, a robbery. Thief-catcher.
O. E. theof or thef, plu. theofas, theath theft, v. theofian, -ede, -ed.
The plural thieves is quite abnormal, and is the only word (except 
“beef,” beves) which violates this general rule, viz., “the only 
words ending in -ef which form the plural by changing it into 
teves are those which end in -af or -ef” (Rule xxxviii.) The other 
nouns in -ief are belief-s, brief-s, chief-s, fief-s, handkerchief-s, mischief-s, mischief-s, relief-s.
Thigh, th (th as in thin). Thy (th as in the).
Thigh, the leg between the body and the knee. Thigh-bone.
Thy, your (singular number).
Thimble, thim’-blé, a metal cap for the tip of the second finger 
of the right hand in sewing; an iron ring with a groove 
round it to receive a rope. Thimble-ridge, a sleight-of-
hand trick; thimble-ridge, thimble-ridge.
A corruption of thumb-bell, Old Eng. thumb ella. Sailors wear the 
thimble on the thumb, tailsors on the third finger.
Thin, (comp.) thinn’-er, (super.) thinn’-est, not thick, to make 
less thick; thinned (1 syl.), thinn’-ing (R. i.), thinn’-ish 
(-ish added to adj. is dim., added to nouns it means “like”).

O. E. thin or thyn, comp. thynna or thynne, super. thynth, thynnes 
thinness, v. thynna[n], past thynnod, p. part. thynnod, thynnung.
Thine (1 syl.), thy or your (sing.) Used as an adjective and as 
an indeclinable pronoun of any case.
“Thine” “Mine” are used in poetry and in the Bible for thy and 
my before words beginning with a vowel: as thine own, mine ears.
“Thine” is also an indeclinable pronoun of all cases:
1. My farm is the largest, but thine is the best (nom. to verb is).
2. He who prunes my trees prunes thine (object. gov. by prunes).
3. Twixt his best actions and the worst of thine (gov. by ef).
4. Between my garden and thine is a high wall (possessive case).
That the word thine does not equal of thee is certain from ex-
ample 3, which would have double “of” by such a substitution.
AND OF SPELLING.

1317

Thing, properly means any material substance, a term of contempt, as what a thing you are, i.e. "how stupid you are."

Things, clothes, luggage, personal property, movables.

Old Eng. thing, thing, or thine. It is not true, as we are generally told, that thing and think are of the same stock, and that thing means "whatever we can think of." We can think of deity, but deity is not a thing. The word really means "whatever has weight," and the verb is not thinken but thingen, to be heavy (materially, morally, and metaphorically). As a universal rule, nouns are not formed from verbs, but verbs from nouns.

Think, (past) thought, (past part.) thought, thaut; think'-ing, to reflect over, to revolve in the mind, to suppose, to believe; think'-able, think'-er.

Methinks, it seems to me; methought, it seemed to me.

To think much of, to esteem highly. To think little of, to esteem lowly. To think nothing of, to set no value on.

Old English thinken, past thought, past part. gothought it seems.

"Methinks" does not mean I think, the verb thinken is impersonal, and me the dative not the accusative case of the pronoun, so that methinks is exactly equivalent to the Latin mihi videtur it seems to me. Old Eng. methinketh, me gethal methought. It will be seen that the g is an interpolation.

"To think" is the O. Eng. verb thanken, past thought, past part. thought.

There is also the verb theal than, -ode, -od, to take thought.

Third, ordinal of three (3), the sixtieth part of a second.

(60 minutes = 1 hour, 60 seconds = 1 minute, 60 thirds = 1 second.)

(In Music) the third interval from any given note; thirds, sounding a note simultaneously with the third from it.

The third estate, the Commons, the other two estates are the lords temporal and the lords spiritual. Thirdly.

(The sovereign is not one of the three estates of the realm; the press is often called the fourth estate.)

Thirteen', 3 + 10; thirteenth, its ordinal.

Thirty, 3 x 10; thirtieth, its ordinal.

Old English thridda or thridda, thir or thry, three. "Third" is a corruption of thrid, and we might as well call three "thir" as third third. So with thirteen and thirty.

Thirst, want of drink. Hunger, want of food.

To thirst, thirst'-ed (Rule xxxvi.), thirst'-ing, thirst'-er.

Thirst'-y, (comp.) thirst'-er, (super.) thirst'-est (R. xi.), thirst'-ness, thirst'-ly. Blood-thirsty, cruel.

FAMISHED (or) STARVED WITH THIRST. Is this correct? Cicero says "cum cibo et potione fames sitisque depulsa cat" (de Fin. i. 11), showing that "fames" could not be applied to both cibo and potione, and this is the general verdict, although we want a word stronger than parched but less exaggerated than dying with thirst.

"Starve" is the Old English steorf'an, to perish for want of sustenance. Milton says "starved with cold," and there seems no reason why we should not say starved with thirst (as drink may be called sustenance as well as food and genial warmth), but we never do.
Thirteen, **thir'teen** (a corruption of **thritteen**), $3 + 10$; thirteenth, the ordinal of 13; thirteenth-ly.

Thirty, **thir'ty** (a corruption of **thirtiety**), $3 \times 10$; thir'ti-eth, the ordinal of 30. The thirty-years war, a great German Protestant war during the first half of the 17th century, terminated by the Peace of Westphalia, 1648.

“Thirteen,” Old Eng. *thrityne, thrytyne, thrittyne* or *thrytyne*, 13; *thritteothe, thritteothe, thrytteothe* or *thrytteothe*, 13th.

“Thirty,” O.E. *thritigg or thrytigg 30; thrittigotha 80th, thrittigfoald.*

“...And (1) reason raise o'er (2) instinct as you can

In this (2) 'tis God direct, In that (1) 'tis man” (Pope)

The following sentence is not according to rule:

“Your (1) eyes contradict your (2) tongue. That (2) speaks of a protector,..., but these (1) tell me you are ruined” (Kenilworth).

Should be: This (2) speaks of a protector, but those (1) tell me...

Thither-ward, thither-wards, towards that place.

Thorax, *thó'.ræx* (th- as in thin), the chest, the part between the neck and the abdomen, the second segment of an insect (between the head and the abdomen), a breastplate, a
cuirass, a corslet; thoracic, τὸ ὀστέον (not τὸ ὀσέον); thoracic-duet.

Greek Θόραξ from Θόρδη, to pulsate (as ὀρθός from ὀρθόν). Pliny says: "Pectus praecordiis et vitalibus natura circumdedit."
"Pectus" is often taken for cor, the Greek Θόρδη (Forcellini).

Thorn, a shrub, a prickle, a small splinter, a trouble; thorn'-y, thorn'-ness, thorn'-less. Thorn'-apple, thorn'-bush, thorn'-hedge. Thorn'-back, a fish. Thorn'-but, a turbot.

Old Eng. thorn, thorn'th; thorny; Germ. dorn, dorn'th, dornig, &c.

Thorough, θόρ'ραθ, complete, through-out, from end to end; thoroughly, thorough-ness. Thorough-bred, completedo (as a thoroughbred horse or dog), of pure extraction.

Thorough-bass, θόρ'ραθ βάση, the science of constructing harmony to any given bass (hence the fundamental rules of musical composition).

The Theory of thorough-bass comprehends a knowledge of the connexion and disposition of all chords, and of all the laws which regulate them. Practical thorough-bass is the knowledge of taking on a musical instrument the proper chords according to the figures placed over or under the bass part of a composition. Thorough-bass was invented by Ludovico Viadana, in 1605.

Thorough-fare, θόρ'ραθ'φαίρ, a passage quite through.

Thorough-going, uncompromising, stanch, complete.

Thorough-paced, perfectly trained, uncompromising, stanch.

We say a thorough-going churchman, disserter, quaker, &c., but thorough-paced horse, tory, whig, radical, &c.

Old Eng. thwirh, thwirh-faru thoroughfare. Our spelling is very corrupt. So "bur[gh]," Mr'rah.

Of all the ten irregularities of -ough "thorough" is about the worst.

(1) ough = off: cough (O. E. cohh'), contraction of coh[etan], to cough.
(2) ough = of: soug[h], trough = sōf, trof (O. E. seof[ung], troch or trog).
(3) ough = of: enough, tough, slough,ough (Old Eng. ceogh, geno or genug, ra[h], s[lough], to[h]).
(4) ough = ow (as in grow): dough, though, furlough (Old Eng. dah or dag, theah; Norse forlov, leave of absence).
(5) ough = oo: thorough (Old Eng. throh).
(6) ough = ow (as in now): plough, bough, slough, dough-ty (Old Eng. plōh or plog, boh or bog, s[og] (a bog), dohtig).
(7) ough = ök: (?lough, though, slough (Old Eng. hol, luh, scag').
(8) ough = öp: hiccough (Dutch huckup).
(9) ough = ürrah: borough, thorough (Old English thurh, burh).
(10) outh = ort: bought, drown'th, sought, sought, thought, wrought. Add draught, naught, taught. (Old Eng. dohte (v. bycan); drawɡh or drawɡh; fehten (v. fehten); nóht, nóth, sōhte (v. secan); thóhte (v. thencan); worht, corrupted into worhte (v. weorcan). Add dt, (Germ. fracht), náht, tóhte (v. técan).

A glance at these words will show that ough has been made to represent nine different combinations: viz., -ag, -ah; -ecag, -ecog, -ecof; -eg, -eh; -eh, Uhr. Such an absurd device could not fail to produce absurdity in spelling and pronunciation.

THOROUGH WORKING ORDER OR THOROUGHLY WORKING ORDER.
The qualifying word of nouns and adjectives is an adverb. Now although we have made thorough an adjective, and have coined the...
word thoroughly for the adverb, yet originally thurgh was an adverb. "Thorough-working" is therefore quite in conformity with old usage. Thus we had thurgh-liked (thoroughly-liked), thurgh-beheld (thoroughly-bright), thurgh-bitter (thoroughly-bitter), thurgh-done (thoroughly-done), thurgh-hated (thoroughly-hateful), thurgh-heavy (thoroughly-heavy), thurgh-hid (thoroughly-hidden), and scores of others.

Monosyllables ending in l and their compounds are very irregular. When a prefix beginning with a vowel is added the double l is retained, but when a prefix beginning with a consonant is added no uniform system is followed. Happily the tendency of the present day is to retain the double l, but scores of words remain to be reduced to order, and some are hopeless.

Of the hopeless are such words as al-mighty, al-most, al-ready, al-so, al-though, al-together, al-ways; "full," in composition, especially at the close of words: as hopeful, fretful.
Of those which may be reformed are such as these: dul-ness for dulle-ness, wilt-ful for willful, skill-ful for skillful, wel-come for welcome; distil, instil, &c., for distill, instill, &c.
We have ill-ness, still-ness, tall-ness, shill-ness, small-ness, fell-ness, &c., why then write dul-ness, ful-ness, and skil-ness?
We have well-bred, well-born, well-nigh, &c.; why write wel-come?
We have full-age, full-blow, full-fed, &c.; why write ful-ness?

The rule ought to be that monosyllables ending in double l, and all their compounds, invariably retain the double "l," except when -ly is added. In Old English full not ful was the affix.

Thrash, to flog. Thrash, to beat out corn.
Thrashed (1 syl.), thrash’-ing, thrash’-er.
Thrashed (1 syl.), thrash’-ing, thrash’-er.

This distinction is very general, especially with the upper classes.

We never say "I will give you a threshing," but some speak of "threshing" and others of "threshing" corn.

Both words are corrupt. The old form was thersc[an] or thersc[an], past tharse, past part. thersc[an]; thersc[al] a threshing-instrument, therscere or therscere a father, thersc[al]-flor a threshing-floor.

The triumph was granted by the Roman senate for a grand victory over an enemy never before conquered. The victorious general rode in a gilt car drawn by four horses, wore a golden crown and gorgeous robe, was preceded by the senate, the captives and the spoils of war, and ascended the Capitol in grand procession to sacrifice a bull to Jupiter Capitolinus (See Cicero In Pison. 25).

An triumph was a lesser triumph. The conqueror did not ride in a chariot, but marched on foot. He was not arrayed in a gorgeous robe but in a magisterial gown (toga praetexta). He wore no golden crown, but a myrtle wreath. The senate did not head the procession. A bull was not sacrificed, but a sheep. Hence the word “Ovation” (from ovis, a sheep).

An ovation was granted when a conquest was not complete, when the contest had been against an inferior foe, when conquest had been achieved with little bloodshed, and when the people had been before subdued but had risen in rebellion.

Words with Un- negative and privative.

Un-, In-, Dis-, Non-, De-, Mal-. (Prefixes.)

Un- (Native prefix, generally of a passive character and joined to the passive participle). It mostly means that union never existed, the absence of; but occasionally it reverses like dis-, as un-wind.

It is joined to native words; to those Latin words which have no negative prefix of their own; to French words in the place of non, peu, pas, sans.

In- (Lat. prefix), void of, failure of effort (written il before l). The relative force of un- and in- in the same words is strongly illustrated in this, in- precedes words of an active force, and un- is the chief prefix of pass participles: as "un-communicated," but in-communicable; "un-comprehended," but in-comprehensible; "un-compressed," but in-compressible; un-concluded, in-conclusive; unconsumed, in-consumable.

Dis- (Gk. and Lat. prefix, generally of an active character and joined to all parts of active verbs). It means severance, the reverse of, the deprivation of.

(Used chiefly with words directly or indirectly from the Latin.)

Non- (Lat. prefix), not, failure in agents but simply privative where no agent is concerned.

De- (Lat. prefix), diminution, sometimes even reversion.

Mal- (Lat. adverb malô), ill, badly, not en rapport.

The list of words beginning with un- is very long indeed. Every past participle capable of a privative or negative meaning may be compounded with un-, even those which admit other negative particles: as in-, de-, dis-, mal-, non-, &c.

Many adjectives, participial adjectives, adjectival nouns, and abstract nouns belong to the same list, the total number being little short of 2,000.

Only those are here given which present some difficulty of spelling or pronunciation, some distinct shade of meaning when compared with other negative compounds of the same word, or some other feature worthy of especial attention.

AND OF SPELLING.

1437

Words with Un- negative and private.

Un-laid, not put down, not laid. Un-lade' (2 syl.), to unload.

Un-delay', to defer; delayed, dc.lāde; delay'-ing, delay'-er.

(These words are from different sources, one is Ang.-Sax. and one Lat.)

"Delay," Fr. délai; Lat. dilatatum or v. diffīro to carry back, to defer.

Un-lawful, ān.law'ful, not lawful; unlaw'ful-ly; unlaw'ful-ness.

Old Eng. unlaw or unlawful, past leogan to lay. Gen. lawful.

Un-learned, ān.lern'ed, not wise, not learned; unlearned-ly,

(4 syl.); unlearnt, ān.lernt', not committed to memory;

unlearn', to forget or abandon what has been learnt.

O. E. ungelcered, ungelceđtite unlearnedly, leórñian to learn.

Un-lèd, not led. (Old English ungelcđan or unlèadden.)

Un-less' (Old Eng. unlesan, unloose). Except' (Lat. excipère

[ex cūpio], take out).

These words may either be treated as imperative moods or what in

Latin is termed the ablative absolute = this proviso being unloosed

or taken out.

"Paul said, except these abide in the ship, ye cannot be saved"

(Acťs xxvii. 31). Paul said ye cannot be saved, this proviso being

disregarded, viz. that ye abide in the ship.

"Ye are saved, unless ye have believed in vain" (1 Cor. xv. 2).

Ye are saved, this proviso being taken away, viz. that ye have believed

in vain.

There is no appreciable difference between these two words thus

employed, but "Except" is used also with nouns after the manner of

a preposition, which "Unless" cannot be: thus "They were a'l

scattered, except the apostles" (Acts viii. 1), that is, the apostles

being excepted (ablative absolute in Latin). I would that all

"were such as I am, except these bonds" (Acts xxvi. 29), these

bonds being excepted (ablative absolute in Latin).

It would have given us a nice shade of distinction if we had em-

ployed "except" exclusively with nouns and their equivalents (as

in the last two examples), and "unless" with verbs or verbal

clauses (as in the first two examples).

Un-lessoned, un.less'nd, not diminished. (Formed from less.)

Un-lettered, un.lett'rd. Illiterate, illit'rate; not book wise;

illiterate-ly, illiterate-ness; illiteracy, ignorance.

We borrow the word letter from the Fr. lettre, a double corruption of

the Lat. littera (a letter), but in the words litterate and illiterate,

literature and literal, &c., we abandon the Fr. lîététre, lîtérature,

littéral, &c., for the Lat. models lîtérātus, lîtératus, lîtérātus,

lîtérātus. Nothing can be worse. If -ét- is to be adopted in

"letter," it should be preserved throughout; if the Lat is to be

followed in lîtereatre, lîtérature, literal, &c., it should be followed in

"letter" and "unlettered." If, however, our word litter (a con-

fusion) was a difficulty, it would be very easy to find a remedy.

Un-level, ān.lèv', sl, not level; unlevelled, lèv'.eld (R. iii., -Ei).

Old Eng. un-level, lèfšlād; Low Lat. levella; Fr. non nivelé.

Six words change the c of the noun into s for the verb: as "advice," advise; "device," devise; "choice," choose; "licence," license; "practice," practise; and "prophecy," prophesy; two others change it into z: viz., "cicatrice," cicatrise; and "price," prise.

Un-lighted, *ūn.l'i'ted, or unlit, not lighted or not lit.

Old English *ūn-līht, verb līht[an], past līhte, past part. līht. It will be seen that lit is the older form. (*g-interpolated.)

The former were farm labourers, the latter servants who performed what is called "ignoble service." All had plots of land for the maintenance of themselves and their families, but they had no property they could call their own, nor could they acquire it. They were free in as much as they could not be sold, but they were not free to leave the manor to which they were attached and go elsewhere.

The Villains in Gross had small plots of land for the maintenance of themselves and their families, but all they possessed and all they earned belonged to the lord.

"Villain" (a tenant). Fr. vilain (one l). This is a blunder, as the word is not from the Latin vilis vile, but villa a country house. For the same reason the spelling Villein adopted by some is not to be justified. (Italian villano, a peasant; Spanish villano.)

"Villain" (a rascal) should be villin, Latin vilis, vile, base. (Some think these are identical words, and that the peasant (villain) was degraded to the rascal (villain) by aristocratic pride, as knave (a lad) has been degraded to knave (a cheat), but the characteristic of peasants is lumpsishness, whereas the characteristic of lords is trickery, and the degradation is only that of degree.)

Errors of Speech—
Please, Sir, you are wanting [wanted].
Vocative wanted [wanting, i.e. there is no vocative].
No time shall find me wanting [falling] in my truth (right).
In winter a supply of coals is greatly wanted for the poor (right).
Nothing wanting [wanted] in this way?
His hair wants cutting. Is this correct? Should it not be His hair needs cutting? It is said that “want comes from wishing,” and the hair cannot wish or want. The reply is this: We use
"want" in two ways, (1) to require what is wished for, and (2) to need what is required: thus, "Our manners want reform." "The fire wants poking." "The plants want more sun," &c., in which examples no idea of "wishing" is present. Those who like may use need in such sentences, but "want" is sanctioned by Anglo-Saxon usage: as weaw fēte, in want of fact, &c.

("Want," Old Eng. wana, wane, wanting. (The t is interpolated.)

Wanton, wæn'ton, heedless, lowd, lascivious, a harlot, to play the wanton, to revel; wan'toned (3 syl.), wan'ton-ing, wan'ton-ly, wan'ton-ness. (Welsh gwantan.)

Wap, wōp. (See Wapping.)

Wapentake, wæntentake, a subdivision of Yorkshire, similar to a hundred or union.

Fleta says the word means "touch-weapon," and arose from this custom: When the "sheriff" was newly appointed he rode, pike in hand, into an open field, where he was met by all those in the union licensed to bear arms. The men filed past and touched the sheriff's pike with their own, in proof of allegiance and good faith. This solution, if true, has this difficulty: the Old English word is wēpen-getec, to teach (the use of) weapons, and not to touch weapons; there is no word meaning "to touch" at all like -take.

Lefc, in his Dict. Saxonica et Gothico-Latinum, gives the word wēpen-getec, and explains it as a kind of militia union, or district out of which all capable of bearing arms assembled at certain fixed periods for military drill and the practice of arms. Sir T. Smith says the wapentake was a muster show of arms and armour, but this is evidently an error. The muster show of arms was called the wēpen-schaw. (Old Eng. getecan, to teach.)

Wapping, wōp'ping, a flogging. Wapping big fellow, a strapping large man. A wapper, a falsehood, a very large specimen. To wap, wōp, to flog; wapped, wōpt.

"Wapping" (a flogging), Welsh wab, to bang; waxbio, to slap. (There is precisely the same analogy in the word "bouncing." To bounce is to brag, to lie; a bouncer is "a lie" or a very large specimen; and a bouncing great fellow means a great tall man.)

In regard to “looking” meaning featured, the blunder is in our use of -ing to express four distinct parts of speech: the part.-ende, the gerund -ennc, the adj. -lng, and the noun -ing, as “seeing is believing.” An absurdity very greatly to be regretted.

"OUR FATHER which art in heaven." Is this correct, or should
AN ACCOUNT OF SPELLING. 1525.

It be who...? The reply is (1) Which used to apply to any gender, although as a relative it is now restricted to the neuter. We see above Huwylc over and Huwylc man. Shakespeare says, "Then Warwick...which did subdue the greatest part of Spain" (3 Hen. VI. iii. 8). Gower has "Adrian, which pope was," and "She which was thy nurse" [nurse] (i. 29 and 195). (2) In the sentence under consideration there is an arrière pensée in the word which. "Who" would express a simple fact that Our Father is in heaven; "Our Father who-is-in-heaven," as "our son who-is-in-France," or "our daughter who-is-on-a-visit," but which refers to the fatherhood, the paternity of the Father, and the sentence may be paraphrased thus: We have an earthly father, thou art our heavenly Father. The father which-is-of-earth hears us, how much more our Father which-is-of-heaven.

Whig, one of the "Liberal" or democratic party. Tory, tör'ry, one of the "Church and State" party. (Extreme Whigs are called Radicals.) "Whigs" are now called Liberals, and "Tories" Conservatives.

The general policy of the Whigs is the removal of everything that obstructs progress. The general policy of the Tories is the reform of everything that needs reform. Setting aside the church of Rome and establishing what we call "disent" is a specimen of Whig policy, but converting the Roman church into the Anglican church is a specimen of Tory policy.

(Thetymology of these words is too long to find place here. Those who wish to enter upon the question may read Burnet's "Own Times" (article "Whig" in the index) and Clarendon's "History of the Rebellion," Bk. iv. Or they may turn to the dictionary called "Phrase and Fable," and read articles "Tory" and Whig.)

Whîtsun-day, the 7th Sunday after Easter kept in commemoration of the descent of the “Holy Ghost,” on the day of pentecost:  Whîtsun-tide, Whitsun-Monday (not Whît-Monday); Whitsun-Tuesday, Whitsun-week.

Archbishop Trench says it means White-Sunday, and was so called from the white robes worn by catechumens who received the rite of baptism on the eve of this day.  This is an error, and has given rise to the errors of Whit-Monday and Whit-Tuesday.  The word is not Whit-Sunday, but Whitsun-day, as may be seen in the words whitsun-ate, whitsun-farthing, whitsun-lord, whitsun-tide, whitsun-week, &c.  Probably the word is a corruption of whîtsun-dag = “wisdom day” (the day when the apostles were made wise by the gift of the Holy Ghost).  Hence the following rhyme.

This day Whitsonday (Whîtsun-day) is cald,
For wisdom and wit serene fald
.... to the apostles at this day.

(Camb. Univ. MSS. Dd. 1. p. 234.)

If it is objected that Whîtsun is spelt with an h, we reply that wit (wisdom) is sometimes spelt with an h also: as I shalle the [thee] whyte [tell] (Camb. Univ. MSS. Ff. v. 48, f. 53).

("Wholly" is quite abnormal, and ought to be written wholly. Every other adverb of words in -le retain the final -e: as fertile-ly, pale-ly, serve-ly, stale-ly, subtle-ly, and vile-ly. The e should be restored to two other adverbs equally abnormal, viz. du-ly and truly. We keep it in blue-ly, vague-ly. The final -e is retained in all the 316 adverbs from adj. ending in -e final, except in du-ly, true-ly, and whole-ly, and there is no reason why these three words should be exceptions to the general rule.)

mand the favour of the public. The following are the principal points to which
attention is called:

1. Comprehensiveness.—New words, that the progress of science, art, and
  philosophy has rendered necessary as additions to the vocabulary, and thousands of
  compound words have been introduced.

2. Brevity.—To ensure this, care has been taken to avoid redundancy of ex-
  planation, while every possible meaning of each word has been given.

3. Pronunciation.—Those who may use it will not be puzzled and confused
  with any arbitrary system of phonetic signs, similar to those usually found in Pron-
  nouncing Dictionaries. Every word of two syllables and more is properly divided
  and accented; and all silent letters are put in italics.

4. Etymology.—The words are arranged in groups, each group being placed
  under the principal word to which its members are closely allied. Words similarly
  spelt, but having distinct etymologies, are separated according to their derivation.

5. Illustrations.—40 pages of Illustrations of various objects given, to assist
  students in arriving at a clear perception of that which is indicated by the name.

WARD AND LOCK'S

PICTORIAL ATLAS OF NATURE.
MEN, ANIMALS, AND PLANTS OF ALL QUARTERS OF THE GLOBE.

FOR HOME AND SCHOOL USE.

In no department of popular education has the progress that characterises our time been more distinctly marked than in the study of Geography; and nowhere have the enlarged views of the present day produced a more complete change in the method of tuition and in the scope of the subject. Geography must no longer be taught as a mere study of names, intermingled with certain statistical details of population, distances, measurements of altitudes, &c. A good geographical knowledge of any given quarter of the globe, or of a separate country, must now include a certain familiarity with the characteristic productions of the quarter or country in question, the types it presents in nations, animals, and plants. Thus, ETHNOGRAPHY, the study of races; ZOOLOGY, the study of animals; and BOTANY, the study of plants, are all to some extent associated with Geography.

In the improved state of the science of Geography, additional appliances have become necessary for its practical study. The atlas of maps, however complete it may be, only presents one aspect of the subject. The student now requires not only to understand the map that teaches him the topography of a country—when he has made himself familiar with the surface of a part of the globe, he requires to be taught what that region has to show as regards inhabitants and animal and vegetable productions.

WARD AND LOCK'S PICTORIAL ATLAS OF NATURE has been prepared with a view of meeting this want. In a series of FIFTEEN LARGE PLATES it places before the eyes of the student the typical forms of the nations, animals, and plants of the various parts of the world. Each plate contains a map, around which the types are grouped; and numbers inserted in this map, and corresponding with others in the pictorial illustrations, show the learner where the races of men, and the plants and animals depicted, have their homes.

The greatest care has been taken to render the atlas strictly educational by the utmost accuracy and truth to nature in the pictures. The plants have been drawn by botanical artists, the animals are not imaginative or fancy sketches, but zoologically correct, and the great majority of heads of men and women are from photographs taken from life, or else sketches from the note books of travellers, to whom the originals have sat. In many cases the scale of proportion in which an animal or plant has been drawn is given. The animals are represented, where practical, surrounded by the scenery of their native homes; besides the plants, the most important parts, such as flowers, fruit, leaves, &c., are separately given to draw the attention of the student especially to their curious or useful points.

Thus the ATLAS OF NATURE becomes a very necessary companion volume to the usual atlas of political geography.

In the schoolroom and the family circle alike it will be found most useful and welcome. A teacher, with one of these plates before him, has only to enlarge upon the notes which have been added in the form of suggestive information, to produce a lecture-lesson that can hardly fail to interest his class. Those engaged in tuition will readily see how much time and labour are saved, in the way of explanation, and how much more vivid an impression is produced than by words alone, when a picture of the object itself is placed before the learner, and his faculty of comparison and analysis is brought into action.

For self-tuition, those learners, now so numerous, who are educating themselves by means of manuals, will find WARD & LOCK'S ATLAS OF NATURE an ever present help, that will lighten their labours by conveying to the eye, in its clearly and correctly drawn pictures, the explanation of much they will find difficult in their books.

The utility of the ATLAS OF NATURE is not confined to the study of geography even in its widest sense. The Student of Natural History, and of Botany, will find in it an equally useful and suggestive companion.
